People & Culture Team

PROJECT OVERVIEW

Youth Unemployment & Digital Access in Africa (2015–2023)

An analysis of 14 African nations using World Bank Development Indicators.

DELIVERABLES CHECKLIST

Interactive Dashboard: Andre_Philip_Nyanjahia_Data_Analyst_Dashboard.xlsx

Source Dataset: Andre_Philip_Nyanjahia_Dataset.xlsx

Executive Summary: One-Page Document (Attached)

TOOLS & TECHNICAL SKILLS DEMONSTRATED

- Advanced Microsoft Excel (PivotTables, PivotCharts, Slicers)
- KPI Development & Dashboard Engineering
- Trend Analysis & Correlation Modeling
- Data Storytelling for Non-Technical Audiences

"Leveraging data to empower the next generation of African youth through strategic workforce development."

Executive Summary

1. Why I Selected This Dataset

I selected World Bank data on youth unemployment and internet penetration across 14 African countries (2015–2023) because it directly aligns with YouthUp Global's mission of youth empowerment, workforce development, and digital skills expansion.

By combining an economic indicator (youth unemployment) with a digital access indicator (internet penetration), this analysis tests whether digital expansion is translating into improved youth employment outcomes across the region. The World Bank provides highly credible, standardized, and comparable data across all 14 nations.

2. Key Insights from the Analysis

- **2023 Regional Snapshot:** The average youth unemployment rate across 14 countries was **8.3%**, while the average internet penetration was **35.7%**.
- **Highest Risk Country: Rwanda** recorded the highest youth unemployment rate in 2023 at **18.2%**.
- **Trend Volatility:** Regional youth unemployment has generally **decreased** from 9.1% in 2015 to 8.3% in 2023. However, it peaked at 9.0% in 2018–2019 before dropping again, showing high vulnerability to economic shocks.
- **The Digital Correlation:** Countries with higher internet penetration generally showed **mixed** youth unemployment outcomes.

NOTE: This suggests that while digital access is a critical enabler, it is not a standalone solution. Digital skills must be paired with economic opportunities and job creation to effectively reduce youth unemployment.

3. Three Recommendations Based on Findings

1. **Targeted Digital-Skills Training:** Prioritize digital literacy and advanced IT training in countries with the highest youth unemployment and lowest internet penetration e.g., Rwanda, Tanzania, Uganda. Equipping youth with these skills will help them access the growing online economy.
2. **Public-Private Job Pipelines:** Partner with local employers, tech hubs, and startups in the highest-unemployment countries to create structured internship and job placement pipelines for youth.
3. **Continuous Monitoring:** Institutionalize this dashboard annually. By tracking these KPIs year-over-year, YouthUp Global can adapt its interventions, measure the impact of its digital skills programs, and allocate resources to the most critical regions.

Technical Note: The dashboard includes a clean layout with 3 KPI cards, 4 meaningful charts (Scatter Plot, Line Chart, Bar Chart, Column Chart), and an interactive Slicer connected to a backend PivotTable.

Conclusion

This analysis demonstrates that while youth unemployment across Africa remains a pressing challenge, the region has made measurable progress over the last decade.

However, the mixed correlation between internet penetration and employment outcomes makes one thing clear: digital access alone is not enough. To truly empower youth, digital skills must be matched with tangible economic opportunities.

I am confident that this dashboard provides YouthUp Global with a practical, data-driven tool to identify high-risk regions, target digital-skills interventions, and track impact year-over-year.

Thank you for the opportunity to complete this assessment. I am highly enthusiastic about the prospect of contributing my analytical skills, MEL experience, and passion for youth development to your volunteer team.

Sincerely,

Andre Philip Nyanjahia
